TotalFacility Introduces Energy Expert, a Real-Time Energy Use Monitoring and Modeling Tool for Facility Managers

The Web-based technology enables facility managers to achieve up to 20 percent in energy cost savings.

MALVERN, Pa. – August 26, 2009 - TotalFacility today introduced Energy Expert, a real-time energy use monitoring and modeling tool that enables facility managers to achieve energy savings of up to 20 percent. The Web-based technology, provided through a partnership with NorthWrite, a wireless energy monitoring provider, is the first of an anticipated suite of TotalFacility solutions that will help facilities managers to optimize their buildings' systems and conserve energy.

"With Energy Expert, TotalFacility's clients can improve operational efficiency, cut energy use and costs and help conserve energy resources," said Dr. Jahan Tavangar, CEO of TotalFacility. "Combined with our existing energy management solutions, we can now provide fully integrated and sustainable facility services to single- and multi-location operations throughout North America. And the technology is easy to install and easy to use."

Based on research funded by the U.S. Department of Energy, Energy Expert tracks the implementation of broad energy savings programs, measures and verifies savings and "flags" unusual changes in energy use. Quickly recognizing potential problems and providing notifications through the Web-based technology enables both service contractors and facilities staff to maintain efficient facilities and helps companies realize cost savings while simultaneously being responsible corporate citizens.

For more information about Energy Expert, contact Jahan Tavangar at jtavangar@totalfacility.com or +1 888-662-4849, ext. 1013.

About TotalFacility

TotalFacility provides integrated and sustainable infrastructure maintenance solutions to more than 40,000 facilities throughout North America. TotalFacility reduces its clients' facilities management costs through demand aggregation, vendor consolidation, and streamlining of work order management and invoice processing. It acts as a single source for all facility service needs by utilizing a national network of 27,000 pre-qualified and score-carded service providers covering more than 80 trades. TotalFacility's unique Web-based technology optimizes the client's facilities maintenance program, with real-time visibility and control over the client's facilities maintenance spend. TotalFacility has completed more than 300,000 projects for Fortune 500 companies throughout North America. For more information about TotalFacility, visit www.totalfacility.com.
